

Sprint 2 Retrospective:

Throughout the process of sprint 2 we used the issues feature on github to track the progress of the project. We tried to use this daily, however we didn't manage to keep on top of it the whole time. It did help and if we were to do a project like this again, we can all see how powerful a tool this really is. The repository commits were all made with much more clear messages to help maintain the readability as high as possible.

The sprint backlog was kept up to date a lot better this week, and this was done by having it open during our scrum meetings. We went around and spoke about how much work got done on a specific task and make the changes accordingly. This was uploaded to the github repo everyday too.

We used a whiteboard for some of the project, however it was more used as a tool to have group discussions about a solution to a problem that a person was having. This worked well as anyone could jump up and draw something while the rest chatted about it.

We broke down tasks in the sprint backlog more a fair bit more to make the process easier and more effective.

We all put in a lot more effort into this week, with everyone spending almost 9-5 every day. Some days were ended later, and some started earlier. We all put in a lot more effort this week to be productive.

We rewrote the user stories in a formal format at the beginning of the week.
